---

The Hon. Penny Sharpe MLC Minister for Climate Change, Minister for Energy  
Department of Climate Change, Energy, the Environment and Water  
New South Wales Government

Dear Minister Sharpe,

Orderly Exit Management Framework Consultation

2023 was the hottest year since records began so it is imperative that the NSW Government take much stronger action on combatting climate change. An important part of this is to keep to the scheduled closure of coal fired power stations, especially in the short term Eraring Power Station.

Instead decision makers should be ensuring enough renewable energy is available to supply power to everyone. This must include enough transmission to supply the electricity to consumers. Batteries increase the distributed supply of electricity and the rollout of batteries across the state must be increased.

Regards  
Annie Nielsen  
Convenor  
Parramatta Climate Action Network
