Australian Petroleum Statistics

Notes

About the Australian Petroleum Statistics

- The Australian Petroleum Statistics (APS) is a monthly publication which provides statistics on petroleum production, refinery inputs and outputs, sales of petroleum products, stocks of petroleum products, and prices. The primary sources for these statistics are voluntary submissions from participating companies, supplemented by administrative data sources and estimates. Trade statistics are sourced from the Australian Bureau of Statistics.
- The petroleum sales data contained in Tables 3A to 3F are currently being reviewed. These tables currently do not represent full coverage of sales across all products, and work is underway to improve this coverage. This includes through analysis of excise data from the Australian Taxation Office (ATO) and improved estimation techniques. Users are advised to exercise caution around using the sales data.
- Monthly natural gas production data in Table 1A are also under review to improve coverage. More complete quarterly and annual estimates of natural gas production are available in the *Resources and Energy Quarterly* and the *Australian Energy Statistics*.
- From 27 September 2016, the energy statistics function, including responsibility for the Australian Petroleum Statistics, transferred to the Department of the Environment and Energy. Our email address is petroleum.statistics@environment.gov.au

Changes in this issue

- This issue of the Australian Petroleum Statistics (APS) sees the introduction of a number of key changes that will improve the quality and usefulness of the statistics. All of the changes have been made in response to stakeholder/user concerns, many of whom have supported the process and provided continuous feedback during the development stage.

The natural gas statistics presented in Table 1A have been revised and the table re-formatted to include estimates of Coal Seam Gas production and export volumes of Liquefied Natural Gas. The revised estimates are derived from survey data benchmarked¹ to data obtained from a range of official sources². Supplementary information from other publicly available sources including company reports have been used to test the coherence of the revised estimates. Revised estimates are presented for the entire published historical time series. The statistics presented in Table 1A in all future issues of the APS will be compiled using this method. The Department of the Environment and Energy are grateful for the help and advice given freely by the owners and custodians of all data sets and supplementary information used in this process.

The "sales by state marketing area", previously tables 3B, 3BB, 3C, 3CC and 3E have now been collapsed into two tables, 3B and 3BB and the statistics presented as a time series. The time series aspect has been introduced at the request of users and has made the presentation of the other three tables unnecessary as all of the information is now contained in tables 3B and 3BB. Additionally, tables 3D and 3F which, for data quality reasons, have been unpopulated for some time have been removed. Improving data quality and accessibility remains a high priority for the Department and it is hoped that these and further detailed breakdowns of the statistics can be presented in the future.

Changes in the next Issue

The forthcoming March issue of the Australian Petroleum Statistics will incorporate a number of revisions to the 'Sales' statistics presented in Tables 3A, 3B and 3BB. Revised estimates will be presented for the entire published historical time series. More details will be provided on the scale of the revisions and the methodology used to derive revised estimates in the March issue.

¹ Benchmarking is a process whereby short term indicators (in this case the monthly APS survey data) are supplemented with more comprehensive, longer term (quarterly, six-monthly or annual) estimates.

² Data have been sourced from the Queensland Government Department of Natural Resources and Mines, the Government of Western Australia Department of Mines and Petroleum and the Government of South Australia Department of State Development. Data are also provided by the National Offshore Petroleum Titles Administrator (NOPTA) via a data sharing arrangement. Information released by EnergyQuest and the Australian Energy Market Operator were used to test the broader coherence of the revised estimates.

(a) Includes reporting companies' own use, but excludes refinery fuel. (b) This is a minimum level and includes only direct sales by the oil industry. The data does not include volumes sold to distributors etc. which are subsequently used or sold for automotive use. (c) Includes petrochemical transfers to industry. (d) Includes automotive diesel oil and industrial & marine diesel fuel.

Notes:

Totals may not add due to rounding.

Refined products may be local or imported.

(a) Includes stocks held by petroleum producers and at refineries and seaboard bulk storage terminals by major oil companies and some large consumers. (b) Includes automotive diesel oil and industrial & marine diesel fuel. (c) Expressed in Crude Oil Equivalent (COE) terms; that is, 1 tonne of product = 1.065 tonnes of COE. (d) Average levels for the fiscal year.

Latest month percentage change from equivalent month of previous year.	-21.0%	12.4%	-14.3%	10.5%	-13.1%	-7.6%	-30.3%	-14.4%	18.7%	-10.5%	-16.3%

(a) Includes stocks held by petroleum producers and at refineries and seaboard bulk storage terminals by major oil companies and some large consumers. (b) Expressed in Crude Oil Equivalent (COE) terms; that is, 1 tonne of product = 1.065 tonnes of COE. (c) Average levels for the fiscal year. (d) Includes automotive diesel oil and industrial & marine diesel fuel. (e) International Energy Agency (IEA) days of net imports coverage is calculated based on the IEA total emergency reserves and net imports methodology of the IEA International Energy Program (IEP). The net imports calculation is rebased in the reporting month of April of each year.

Notes:

Australian prices are weighted based on state volumetric sales and the average retail price in each of the capital cities during the quarter and include all taxes.

All prices are nominal and have not been adjusted for inflation.

Average	52.5	26.8	79.3

Notes:

Australian prices are weighted based on state volumetric sales and the average retail price in each of the capital cities during the quarter.

International prices are converted from local currency to Australian dollars using the average daily interbank rate for the quarter (midpoint price) sourced from www.oanda.com.

All available country data are shown in the tables. If a country does not appear under a particular fuel type then no data has been provided by that country for that fuel.

No prices are available for Denmark.

Premium unleaded petrol prices are for 95 RON in all cases except New Zealand, which is for 96 RON.

RON grades for premium unleaded gasolines should be taken as indicative only. The specifications for the rating systems used vary by reporting country.

All data are for September quarter 2016. December quarter data for Australia are shown in Table 8A.

Average OECD prices are the simple average and are not weighted.
